BRIAN GABOT WEB DEVELOPER

EXPERIENCE

Freelance Developer – Self-Employed

Nov 2016 – Present, San Francisco Bay Area, CA

- Collaborated with designers to create complex design projects through the use of HTML, CSS and Javascript

Developer and Designer – Pixelwearables Co

Sep 2016 – Dec 2016, San Francisco Bay Area, CA

- Helped facilitate company growth and assisted the development for a website for a stealth mode startup

Full Stack Web Developer – General Assembly

Sep 2015 - Dec 2015, San Francisco, CA

- Completed a 12 week immersive course teaching MEAN and Ruby on Rails Stacks. Created three web applications within one week sprints

Order Management Lead - Kiwi Crate

Nov 2014 - Sep 2015, Mountain View, CA

- Improved operating efficiency by 150% by helping integrate XHTML and HTML templates for order processing into the Magento ecommerce platform

Web Content Coordinator - Glyde Corporation

Oct 2012 - Nov 2014, Menlo Park, CA

- Assisted the engineering team with web testing and reported various issues through JIRA dashboard such as bugs and defects
- Improved user experience and enhanced company growth by helping out with the design work for several company products with the use of Adobe Creative Suite

PROJECTS

Persona Gamer - <https://shrouded-caverns-8468.herokuapp.com/>

Persona Gamer is a personality test application catered towards rpg gamers. The tests were created through Javascript and developed to be a replica of the Traitify personality tests.

LFG - <http://lfg-meetup.herokuapp.com/>

LFG is a social networking portal targeted towards gamers. Collaborately worked with three other programmers to create a full-stack web application built on Ruby on Rails and PostgreSQL database. Assisted with the creation of the website's interface through HTML and CSS. Created routings, authorizations and validations for back-end development.

Project Sakura - <http://projectsaku.herokuapp.com/>

Project Sakura is an application used to help people from the bay area find Japanese music events. Web Interface is built in React and Redux. Google Maps and Soundcloud APIs were integrated into this application. Created icons and illustrations through Adobe Illustrator.
